Project Title: RateThePlace

Project Description:

RateThePlace, is an app centered around to improve the quality of life of people. This project aims to help those that want/interested to know, the thoughts and opinions from others, about areas, cities, and neighborhoods.

The app will contain a rating system based on different categories, so that the person looking at the reviews can look for the categories that apply to them. They are also able to review the comments/reviews made by other people about said area.

The app will integrate Navigation Tools (like GoogleMaps) so that you can easily find said place and view the ratings and reviews.

For the ability to make a review/rating about a place, it is required, to have proof of having been there or be in a decent distance ratio of said area to upload your thoughts.

Week 3: 1/22/2022

- Overall Status (on-schedule, behind, ahead): behind
- Number of hours worked this week: 6
- Total number of hours worked on the project thus far: 6
- Number of total hours anticipated at completion: 165
- Accomplishments: Senior Project Proposed
- Challenges: Being Sick, No laptop, flight delays.(for the previous weeks)

- Plans / Goals for next week: Research and set up a plan to learn/implement the needed technologies for this project.
- SPED Talk Insight: I watched the Sped Talk by Knighten Cooper about Neural Networks. This topic actually really interests me, since I am hoping to learn more and more about machine learning and how to apply it for some projects I want to work on in the future. His Presentation was very well prepared.
- Other comments for the Instructor: I feel like I may need some advice on how I can use my time for this project to my advantage.
